FIRST US INCUBATOR WITH INTEGRATED PULSE OXIMETRY GAINS FDA 510(K) CLEARANCE

TUESDAY, OCTOBER 03, 2006: IVYLAND, PA USA: NeoForce Group, Inc. announced that they have received clearance from the US Food and Drug Administration to begin selling and promoting the Masimo SET® SPO₂ pulse oximetry feature in the Atom V-2200 Incubator. The Atom Model V-2200 Incubator features a unique multi-functional color display that when combined with optional Masimo SET® pulse oximetry and servo oxygen control gives hospital staff unprecedented control and monitoring of an infants' condition and micro environment.

The screen shot (shown right) demonstrates the V-2200's ability to provide clinicians with a combination of critical environmental and patient parameters.

“Following a successful launch of the V-2200 in June of this year, the addition of the Masimo SET® solution will further strengthen our position as an innovator in the US NICU incubator market”, stated Otho Boone, President of NeoForce Group.

Mission: NeoForce recognizes that it is a privilege to be your partner in the care of newborn infants. Everyday we will strive to earn your trust by providing products and solutions using the highest standards of business ethics and regard for the health of your staff and patients.
