## NEOFORCE LAUNCHES NeoPIP™ INFANT RESUSITATION UNIT

IVYLAND, PA USA: FRIDAY, OCTOBER 26, 2007. NeoForce is proud to introduce the NeoPIP™ Infant Resuscitation Unit. The NeoPIP™ is intended for emergency manual resuscitation of infants and is used in conjunction with a flow meter to deliver precise control over peak inspiratory pressure (PIP) during the resuscitation process. When used with the NeoPEEP™ breathing circuit, the unit will also provide positive end expiratory pressure (PEEP) support to help keep the immature lung open during exhalation. “Finally we have a complete solution to meet all of our customers’ resuscitation needs”, stated Otho Boone, President of NeoForce Group. “The NeoPIP™/ NeoPEEP™ combination in conjunction with our V-505 warmer, gives our customers a variety of ways to satisfy current guidelines for resuscitation as set by the American Academy of Pediatrics”, continued Boone.

NeoForce received FDA 510(k) clearance for the NeoPIP on September 12, 2007 and recently completed the initial build of production units which will be shipped to customers at the beginning of November.
